

The ECtHR dataset contains ECtHR judgments until 5 December 2020.

Here is a description of the variables (in column order) present in this dataset:

appno:	application number; you may notice that there are recurring application numbers and case titles in the dataset. These are not duplicates, but merely two judgments rendered in the same case. This happens when a case is referred to the Grand Chamber/when issues of just satisfaction are reserved to separate proceedings
ecli:	European Case Law Identifier
docname:	case title
article:	ECHR/Protocol articles the case concerns
conclusion:	case outcome
doctypebranch:	the court composition
importance:	case importance level; see the section on the importance filter in the HUDOC user manual (note that importance level 'Case Reports' = 'Key case' nowadays)
judgementdate:	the date of the decision
year:	the year of the decision
respondent:	ISO 3166-1 alpha-3 country codes of respondent state(s)
separateopinion:	whether separate (concurring/dissenting) opinions are present
nonviolation:	which provisions were not violated
violation:	which provisions were violated
